THE BIGGEST CHALLENGE TO USING FREQUENCY MEDICINE (RIFE) FOR CURING CANCER - DR. BILL MCGRAW (PANAMA)

Synopsis: Frequency medicine or Rife technology has been successfully saving the lives of 1000s of people over the past 90 years. There exists an incredible amount of evidence both in **documented studies and testimonies** of people that have used **Spooky2** kits (Rife tech) to kill cancer cells and completely heal themselves of chronic disease. For this talk, Dr. Bill McGraw will discuss the **current challenges of Rife frequency medicine** and why it has not advanced to become the prominent way people cure themselves of cancer.

Speaker: Dr. Bill McGraw, from Pennsylvania earned two degrees from his home state as well as from Alabama (Ph.D.) and then went on to complete a post doctorate fellowship at HBOI at Florida Atlantic University. Dr. McGraw has lived and worked in **New Zealand, Australia, South Africa and now Panama** where he is a resident for 15 years. Dr. McGraw has spent over **20 years researching the science of alternative health**, while healing people from chronic disease. He has published two books, multiple e-publications and conducted hundreds of interviews, seminars and podcasts with some of the biggest names in alternative health over the past decade.

CANCER TREATMENT MONITORING USING LIQUID BIOPSY BASED ON CIRCULATING TUMOUR DNA (ctDNA)

- DR CHAN WAI TING

Synopsis: Minimal residual disease (MRD) monitoring is a **liquid biopsy** or blood-based approach used after cancer treatment to check whether very small traces of cancer may remain in the body and to track changes over time. MRD can be too small to be seen on imaging scans, but in some cases, it can be detected using sensitive blood-based methods. This approach is based on **circulating tumour DNA (ctDNA)** - tiny fragments of DNA released into the bloodstream from tumour cells. After effective treatment, ctDNA levels often fall to very low levels; if ctDNA signals persist or rise again during follow-up, it may indicate residual disease or possible recurrence.

DNA methylation is a natural chemical “tag” on DNA that helps regulate which genes are switched on or off. In cancer, these tags often change in a characteristic pattern, creating a detectable “**cancer fingerprint.**” By analysing cancer-related methylation patterns in ctDNA from a blood sample, MRD monitoring can detect very small signals and be repeated over time periodically. This approach can provide an additional information to assess treatment response and recurrence risk

Speaker: Chan Wai Ting (PhD) is a **molecular research professional** with extensive experience in **microbiology and advanced molecular biology**. She is currently the Head of Scientific Commercial at **SCI Laboratories**, where she drives scientific-commercial strategy and supports the translation of **innovative molecular testing solutions** into clinical and market impact.

REVERSING METABOLIC ABNORMALITIES & MODULATING TUMOUR MICRO ENVIRONMENT: INSIGHTS FROM AN INTEGRATIVE ONCOLOGY CENTRE

- PROF. (DR.) PRADEEP M.K. NAIR (INDIA)

Synopsis: This work presents an integrative oncology model developed at Mirakle Integrated Health Centre that views cancer as a disorder of metabolic dysregulation and tumor-microenvironment imbalance rather than only a genetic disease. The approach emphasizes identifying metabolic markers, correcting gut dysfunction and nutritional deficiencies, and restoring immune and mitochondrial function. Therapies such as dietary modification, nutraceuticals, mind-body practices, ozone therapy, and oncothermia are combined with appropriate conventional treatments. The protocol aims to reduce tumor fuel supply, improve tissue oxygenation, induce apoptosis, and enhance immune surveillance. Ultimately, the model seeks not merely tumor control but holistic recovery, reduced suffering, and improved quality of life for cancer patients.

Speaker: Dr. Pradeep MK Nair is the **Medical Director and Chief Scientist at Mirakle Integrated Health Center, India's first Integrative Oncology Hospital**, and **Director of the Indian Academy for Scientific Writing and Research, Pune**. He previously served as **Professor and Head of Research at Sant Hiranandaram Medical College of Naturopathy & Yogic Sciences for Women, Bhopal**, and was the **founding Head of R&D at the National Institute of Naturopathy, Government of India**. A renowned researcher in Naturopathy and Yoga, he has authored over 80 peer-reviewed publications and 23 textbook chapters, authored *The Scientific Naturopath*, and edited *The Clinical Naturopathy and Medical Ozone Therapy*. He is the first BNYS graduate from India to publish in the *British Medical Journal*. His research interests include integrative oncology, fasting, gut microbiota, biorhythms, medical ozone therapy, and public health.

USING CELL-SONIC* SHOCKWAVES (VERY INTENSE PRESSURE PULSES) FOR NON-INVASIVE, DRUG-FREE TISSUE REGENERATION & HEALING (*CELLSONIC IS A CLASS 1 FDA-APPROVED MEDICAL DEVICE)

- DR. ARUT SIVA (SINGAPORE)

Synopsis: What if we could heal without scalpels, drugs, or side effects? Join us to explore a **new frontier in medicine** as we move from **biochemical to biophysical healing**. This session introduces the CellSonic VIPP device, a non-invasive technology that uses Very Intense Pressure Pulses to trigger the body's innate healing mechanisms. Discover how this revolutionary approach uses **sound waves to treat tumours, resolve chronic skin conditions, and alleviate pain by reprogramming cells rather than poisoning them.**"

Speaker: Dr. Arut Siva is the founder of Medi Therapie Singapore and a board-certified **Naturopathic Doctor** (ND) and Certified Natural Health Professional. A specialist in **bio-energetics wellness** with research dating back to 1999, he focuses on **holistic, non-invasive solutions for lifestyle diseases**, including diabetes, heart problems, and chronic pain. In his practice, Dr. Siva integrates **advanced biophysical technologies** like CellSonic VIPP to support the body's innate healing powers and address **cellular health from its deepest core.**

IVERMECTIN – FENBENDAZOLE PROTOCOL FOR CANCER

- DR. AMIR FARID ISAHAK (MALAYSIA)

Synopsis: Although not medically approved for the treatment of cancer in humans, the **Ivermectin-Fenbendazole protocol** is being actively used around the world by many groups of people. In recent times, the first-in-the-World Ivermectin, Mebendazole and Fenbendazole Protocol in Cancer has **been peer-reviewed and published on Sep.19, 2024** with lead authors **Ilyes Baghli and Pierrick Martinez**. Dr. Amir's presentation will cover the following topics:

- **A brief history of ivermectin and fenbendazole/mebendazole.**
- **A brief history of the 3 deworming drugs being repurposed for cancer.**
- **Results from testimonies, case reports and personal cases.**
- **The protocols for ivermectin and fenbendazole/mebendazole in cancer treatment**
- **Other tried/recommended concurrent treatments and supplements**
- **His personal protocol.**

Speaker: Dr Amir Farid Isahak is a senior medical consultant with over 45 years of medical practice. He is a retired Ob/Gyn but continues practicing holistic integrative medicine with interests in anti-ageing and chronic lifestyle diseases. He got wedged in the ivermectin controversy during the **COVID-19 pandemic** and became one of the active promoters of its use. After the pandemic was over, he then promoted ivermectin (and fenbendazole/mebendazole) for the treatment of cancer especially for those who do not respond to conventional treatments, or those who refuse conventional treatments (for whatever reasons).

POTENTIAL MANAGEMENT OF CANCER AND CHRONIC DISEASES ACCORDING TO INDIVIDUAL PHYSICAL AND MENTAL AYURVEDIC CONSTITUTION (PRAKRUTI AND MANAS PRAKRUTI)

- PROF DR. L. EDUARDO CARDONA-SANCLEMENTE

Synopsis: Dr Cardona's today's view is that a combination of the profound and coherent protocols of ancient medicine combined with the existent modern medical technological diagnostic are the instrumental pathway for treating suffering individuals. Topic will cover:

- The Brief Description of Ayurveda and Its Purposes
- Ayurveda and Body/Mind/Consciousness Imbalance
- Ayurveda and Body Types (Prakruti: Vata, Pitta, Kapha)
- Ayurveda and Mind Types (Manas Prakruti: Sattva, Rajas, Tamas)
- Response to Cancer and Other Pathologies according to Prakruti and Manas Prakruti
- How to Integrate Ayurveda in Your Daily Life for a Proper Balance
- Key Ayurvedic Concepts in Cancer Management

Speaker: Dr L. Eduardo Cardona-Sanclemente, DSc, PhD, MSc is a Fellow of the Royal Society of Medicine, UK. Dr Cardona's career spans professorships and senior teaching and research posts at some of Europe's most distinguished Western medical schools including Institut Pasteur; Salpêtrière Hospital; Institut Biomedical des Cordeliers, Institut Français de Chiropractie, Paris; University of Perugia Medical School, Italy; King's College London and St. Bartholomew's Hospital Medical College, London, UK. His integrative medical work includes senior teaching at institutions such as Bastyr university, Seattle; University of New Mexico, Albuquerque and Five Branches University, Santa Cruz, USA. After graduating in Medical Sciences, he completed his Masters in Clinical Biochemistry, studying the role of different types of vegetarian diets. His PhD was on the Mechanism of Uptake of Neurotransmitters and his Doctor of Science (Docteur d'Etat) was in Physiology of Nutrition on cholesterol levels distribution and management. His Masters in Ayurvedic Medicine (with internships at AVP Hospital, Coimbatore and Udupi, India where he holds a Visiting Professorship) includes a dissertation correlating Obesity under the light of Ayurveda and integrating it with Current Medicine. Dr Cardona is an Ayurvedic Doctor (NAMA Professional Member Level), and a Fellow of The Royal Society of Medicine (UK).

MECHANISMS OF DISEASE

- DR. PHILIP McMILLAN (UNITED KINGDOM)

Synopsis: Dr. Philip McMillan will present a really important concept in current times - he will share how SARS-COV2 upregulation of CD147 (the "Turbo Cancer" Mechanism) is likely to be contributing to more aggressive cancer presentation. The upregulation of CD147 (also known as Basigin or EMMPRIN) by SARS-CoV-2 - both via direct viral entry and through inflammation-driven mechanisms - is emerging as a critical, high-risk pathway that likely converts indolent tumours into more aggressive, metastatic cancers. CD147 acts as a master regulator in the tumor microenvironment (TME), promoting invasion, therapy resistance, and immune evasion.

Speaker: Dr. Philip McMillan, MB.BS, MRCP(UK) Research Director at McMillan Research Limited has a well-established reputation as a supervisor, instructor, mentor at post-doctoral, post-graduate and undergraduate level in a wide range of medical and scientific subjects in areas such as nutrition and metabolism, biochemistry, physiology, and pathophysiology. He currently works as a physician in the UK and his main interest is in COVID-19 autoimmunity, with a specialist interest in dementia.
